RE: Southeast Rockford Ground Water NPL Site
Ground Water Monitoring Results - Sampling Event #19

Dear Ms. Kolak & Mr. Williams:

The analytical results for the ground water monitoring samples collected at the Southeast Rockford Groundwater Contamination Site (the Site) during the semi-annual monitoring event conducted in May 2008 are enclosed. This sampling event constitutes the 13th semi-annual sampling event and 19th sampling event overall for the long-term ground water monitoring element of the remedy established under the approved RD/RA Work Plan.

Sample collection and analyses were completed in accordance with the Site Field Sampling Plan and RD/RA Quality Assurance Project Plan (QAPP), as amended. Sample preparation and analyses were performed by TestAmerica of Amherst, New York consistent with US EPA CLP procedures. The analytical results were validated by NES. The validated laboratory data sheets and data quality summaries are provided in Appendix A.

The ground water monitoring network is shown in Figure 1. The analytical results for the chemicals of concern identified in Section VI of the Site Record of Decision (ROD) are summarized in Table 1. Please note that, although vinyl chloride (VC) is not identified as a chemical of concern (COC) in the ROD for the Site, concentrations reported above the MCL of 2 µg/l are listed in Table 1 at the request of USEPA in correspondence dated December 14, 2006.

The historical analytical results for samples collected from the Site ground water monitoring network by monitoring well location are presented in Table 2. Table 2 also includes the sum of the total VOC concentrations for the Site COCs. The total VOC concentrations reveal general trends at each monitoring location. In brief, the historical data for total VOCs indicates the following:

1. Total VOC concentrations have generally decreased across the Site since inception of the long-term monitoring program in March 1999, with the exception of certain monitoring locations located immediately down gradient of identified source areas as presented below.
 - o Total VOCs in ground water monitoring locations near source Area 7 were lower than the prior sampling event in October 2007 with the exception of MW-101A/B/D, MW-102C, MW-113A, and MW-133B.

- Total VOCs in ground water monitoring locations near source Area 9/10 were lower than the prior sampling event in October 2007 at MW-203.
 - Total VOCs in ground water monitoring locations near source Area 4 and Area 11 were either generally consistent or moderately higher than the prior sampling event in October 2007.
2. The ratios of parent VOC compound concentrations with associated breakdown product concentrations appear to indicate that natural attenuation is occurring at the Site.
 3. Total VOC concentrations at monitoring locations proximate to the Rock River are generally constant or decreasing.
 4. A ground water sample was not collected from MW-101C during the recent sampling event due to ongoing access issues at that location. The NES field representative has been in contact with Tom Williams, IEPA regarding resolution of the access issue.

Please contact me at telephone 303-232-2134 if you have any questions regarding the information provided or require any additional information.

Sincerely,

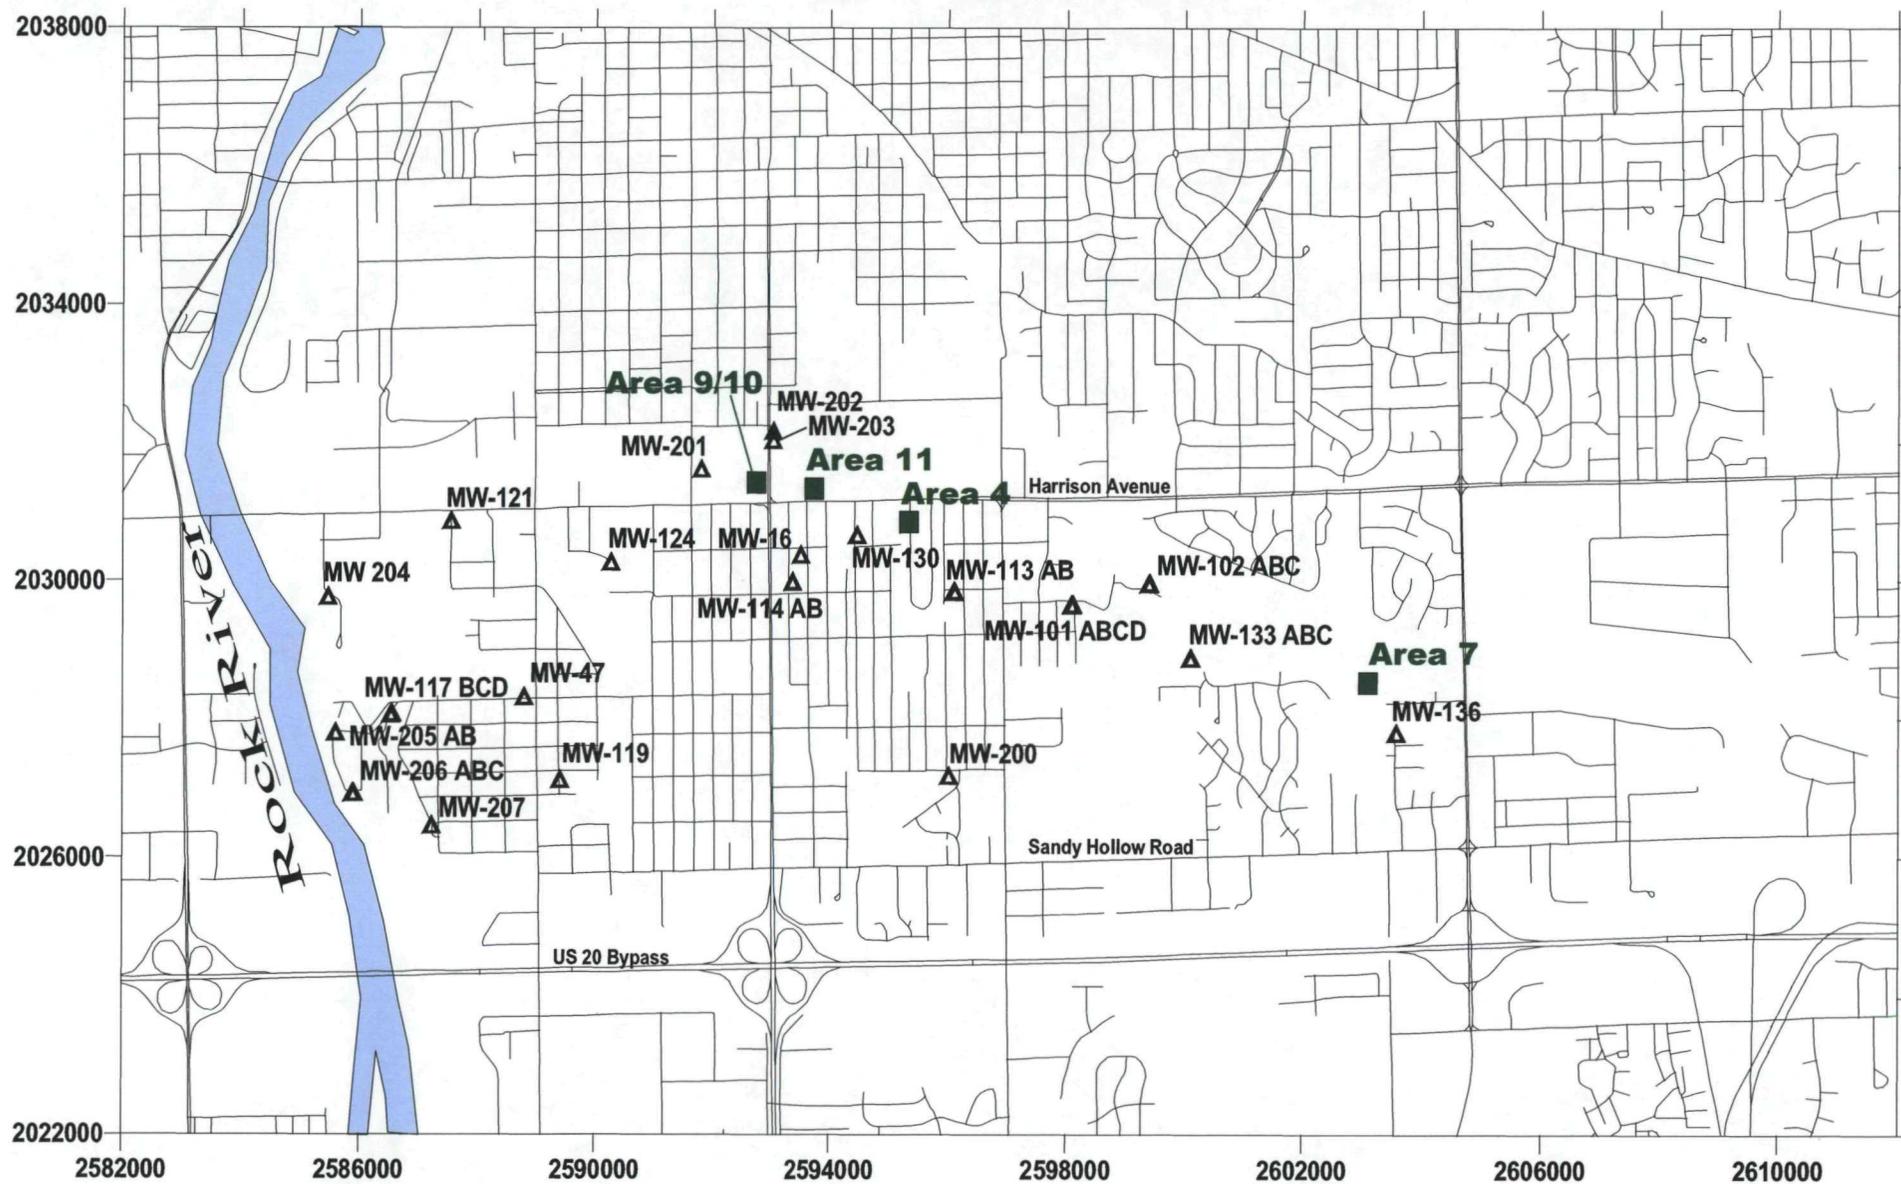

William B. Dotterrer,

William B. Dotterrer,
Sr. Project Manager

Data Quality Control Criteria Review Summary

SDG Number: May08

Project Number: 1016-2

Site: SE Rockford, 19th Event

Contractor Lab: TestAmerica (Amherst, NY)

Validator: Brian LaFlamme

Validation Date: July 1, 2008

Sample Matrix: Water

Sample Date: May 15-19, 2008

Analytical Methods: EPA 3/95 CLP Volatiles (OLC02.1)

Sample Designations:

FD-1 dupe of (MW-133C)	MW-101D	MW-114A	MW-121	MW-136	MW-205A

					Trip Blank

The analytical data were reviewed in accordance with the analytical methods and the Environmental Protection Agency (EPA) Contract Laboratory Program (CLP) National Functional Guidelines. The review included comparing quality control (QC) values provided on the laboratory QC forms to method QC criteria. Review of the raw data was not performed.

Quality Control Summary

X Acceptable, no qualification necessary

NR Not required

See validation summary comment

NA Not applicable

*) The reviewer has indicated in the comments the method specific QC results included in the data package that were reviewed.

#) Field QC may include field duplicates, trip blanks, rinse blanks, field blanks, and equipment blank samples as required by project specific criteria.

Data for the above samples are:

- Acceptable for use
 Acceptable for use as qualified
 Unacceptable for use

Is action required by the Project Manager?

Yes No

Data Validation Summary Comments:

1. The analysis of a diluted sample for FD-1 was outside EPA-recommended holding times (14 days) by one day. The undiluted sample was analyzed within holding time. The diluted results were confirmed by the undiluted results. There is no affect on data usability; however, detections in the diluted sample were qualified "J".
2. Results of field duplicates follows:

Sample	Parameter	Investigative Sample (µg/l)	Duplicate Sample (µg/l)
MW-133C	Methylene Chloride	16U	2U
	trans-1,2-Dichloroethene	8U	2
	cis-1,2-Dichloroethene	120	110
	1,1-Dichloroethene	62	65
	1,1-Dichloroethane	60	60
	Chloroform	8U	7
	1,2-Dichloroethane	8U	2
	1,1,1-Trichloroethane	180	200
	Trichloroethene	100	110
	Tetrachloroethene	8U	6
	MW-203	Methylene Chloride	2U
trans-1,2-Dichloroethene		1U	1U
cis-1,2-Dichloroethene		1U	1U
1,1-Dichloroethene		1U	1U
1,1-Dichloroethane		1U	1U
Chloroform		1U	1U
1,2-Dichloroethane		1U	1U
1,1,1-Trichloroethane		1	1
Trichloroethene		1U	1U
Tetrachloroethene	1	1	

As shown, the investigative and duplicate sample results are in good agreement with each other. Therefore, the samples collected during this quarter are deemed representative of Site conditions at the time of sample collection.

OVERALL ASSESSMENT OF DATA

Based on the review of the quality control criteria, the method appeared to be in control. Therefore, the data are acceptable for use as qualified.

**RE: AIR PERMIT EXEMPTION STATUS
 West KL Avenue Landfill Gas Flare Station**

Dear Mr. Deskins:

At the request of our client, KL Avenue Landfill Group (KLA Group), Golder Associates Inc. (Golder) has prepared this letter to document that the proposed landfill gas flare station at the West KL Avenue Landfill Superfund Site (Site) in Oshtemo Township, Kalamazoo County Michigan meets the permit to install exemptions pursuant to Part 55, Air Pollution Control, of the Natural Resources and Environmental Protection Act (NREPA), PA 451 of 1993, as amended, and its rules. As outlined in Rule 285(aa) of the Michigan Air Pollution Control Rules, the requirements of Rule 201(1) to obtain a Permit To Install does not apply to "landfills and associated flares and leachate collection and handling equipment."

This Site is currently listed on the National Priorities List (NPL) and the proposed gas system is being constructed to assist in compliance with the remedy requirements of the July 1992 Consent Decree (CD) between the KLA Group and the United States Environmental Protection Agency (USEPA). In addition to Rule 285(aa) noted above, the CD states that work conducted entirely on-site is exempt from local, state, and federal permits.

To demonstrate exemption from these rules, Golder prepared an estimate of the amount of emissions that could occur from the landfill enclosed flare specified for this Site. In preparing the estimate, Golder assumed that the flare will be operating at full design capacity (900 standard cubic feet per minute (SCFM)) and that the landfill gas stream will have a methane (CH₄) content of 65 percent by volume). Other design criteria used in the estimate included the following specifications are outlined in the project specification requirements and as offered by the manufacturer.

- The landfill gas stream is characterized by the following parameters.

Flow Rate:	900 SCFM (maximum) 150 SCFM (minimum)
Composition:	20% to 65% CH ₄ ; remainder Chlorinated VOCs and other non-methane organic compounds (1 lb/hr Chloride); VOCs; CO ₂ ; air (N ₂ , O ₂); Sulfides; and inert gases.
Lower Heating Value (LHV):	920 BTU/SCF (at 100 percent methane)
Temperature:	100 degrees F

Moisture Content: saturated

- The enclosed flare is designed for the following process conditions:

Smokeless Capacity: 100%
Operating Temperature: 1500 degrees F to 1800 degrees F
(2000 degrees F shutdown)
Retention Time: 0.7 seconds (minimum) at 1800 degrees F at
maximum flow, including combustion air
Inlet Pressure: 5 inches H₂O
Heat Input to Burner: 25,000,000 BTU/hr (maximum)

- Emissions from the flare are designed not to exceed:

Nitrogen Oxide (NO_x): 0.06 lb per million BTU fired
Carbon Monoxide (CO): 0.20 lb per million BTU fired

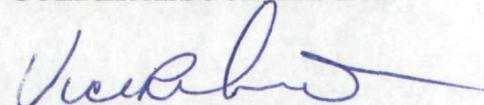

- The flare system will achieve a destruction efficiency greater than 99% of total organic compounds and greater than 98% of total non-methane organic compounds (NMOC) throughout the entire flare operating range, without any burner adjustments or flare modification.

A copy of the emissions estimate is included in Table 1. The estimated emissions are compared to the significance levels defined in Rule 119 to demonstrate that the permit exemption under Rule 285(aa) applies. As noted in Table 1, the landfill gas flare station will not emit air toxics above established significance levels. Therefore, we believe that the proposed landfill gas flare is exempt from permitting under Michigan Air Pollution Control Rules.

The landfill gas flare station is scheduled to become operational within the next month. As such, we respectfully request that any concerns with this analysis be provided to us as soon as possible. If you have any questions or need additional information, please contact us at the numbers listed below. Thank you in advance for your consideration and time with this matter.

Very truly yours,

GOLDER ASSOCIATES INC.
